## SUMMARY

Motivated MSc Cybersecurity student specializing in ethical hacking, vulnerability assessment, penetration testing, network security monitoring, and Linux administration. Hands-on experience through multiple cybersecurity internships involving web application testing, threat analysis using Python, and secure infrastructure practices. Strong ability to clearly explain technical concepts. Passionate about cybersecurity education and seeking a Cybersecurity Tutor role to teach, mentor, and help students build practical skills in ethical hacking and cyber defense.

## PROFESSIONAL EXPERIENCE

**Cybersecurity & DevOps Intern, Triarch Private Limited | Chennai** June 2026 (1–21 June)

- Completed a 21-day intensive internship covering core Cybersecurity and DevOps concepts through structured practical sessions.
- Gained hands-on exposure to Linux environments, basic system administration, and security operations workflows.
- Improved understanding of how security practices integrate with operations, strengthening both technical knowledge and teaching potential.

**Cybersecurity Intern, Prodigy InfoTech | Remote** December 2025 – January 2026

- Conducted vulnerability assessments and basic penetration testing on web applications to identify security weaknesses.
- Performed network security monitoring and threat analysis using Python scripts along with Wireshark and Nmap.
- Prepared structured cybersecurity reports documenting findings and recommendations, developing strong technical explanation skills.
- Gained practical understanding of the vulnerability assessment lifecycle from testing to reporting.

**Web Developer Intern, InTermPe | Remote** June 2025 – July 2025

- Developed and optimized responsive web applications using HTML, PHP, and JavaScript with focus on clean structure.
- Strengthened ability to break down technical steps clearly — a skill valuable for teaching programming and web security concepts.

## TECHNICAL SKILLS

- **Cybersecurity:** Ethical Hacking, Vulnerability Assessment, Penetration Testing, Network Security Monitoring, Threat Analysis, Cyber Defense, Security Reporting
- **Tools & Platforms:** Wireshark, Nmap, Linux (Ubuntu), Python Scripting, Basic Shell Commands
- **Programming & Databases:** Python, PHP, C++, VB.Net, MySQL, MongoDB, SQL, HTML, JavaScript
- **Teaching & Communication:** Clear Technical Explanation, Mentoring Mindset, Concept Simplification, Documentation, Presentation Skills

## PROJECTS

**CSPM — Container Security Posture Management Framework (Python)**

- Designed and built a lightweight, modular Container Security Posture Management system for Docker/Kubernetes environments.
- Implemented multi-layer pipeline: configuration & vulnerability ingestion, policy-as-code evaluation, ML-based runtime anomaly detection (IsolationForest), and unified multiplicative risk scoring.
- Developed simulated Kubernetes admission control and Slack/webhook alerting for High/Critical findings; included CLI dashboard and Streamlit GUI.
- Fully self-contained (JSON persistence, no external DB); maps academic research requirements (OPA-style policies, eBPF/Falco-style telemetry, context-aware correlation) into concrete modules.

**Inventory with Payroll System (VB.Net + MySQL)**

- Designed and developed a complete Inventory with Payroll Management System using VB.Net (frontend) and MySQL (backend).
- Implemented modules for stock/product management, inventory tracking, employee management, attendance, payroll calculation, and salary generation.
- Built a user-friendly interface for efficient data entry, searching, reporting, and management of inventory and payroll records.
- Designed relational MySQL database structure with proper tables and relationships to ensure data integrity across modules.

## EDUCATION

**AJK College of Arts and Science** 2025 – Present
M.Sc. Cyber Security

**S.T. Hindu College, Kanyakumari** 2022 – 2025
Bachelor of Computer Applications (BCA)
